

## What has been done in the last week?

- Implemented the step-down (sense) transformer
- Implemented the LT1394 to detect the zero crossings.
- Used ideal NAND gates to split the comparator output into two complimentary signals. (Under **STEADY-STATE**)

## Plan for next week:

- Find a proper Quad NAND gate IC for LTSpice (or model it)
- Construct an RC (low-pass) filter for the time-delay signal to allow for dynamic start-up.
- Drive the MOSFETS!

## Comparator Input / Output

## Quad NAND Gate Output
